

“G-String” Challenge

Objective:

This is a timed event. The goal of this challenge is to focus on accuracy above everything else. Once the targets are prepared (*direction down below*) and the competitor is staged and ready at the 10-yard line (pistol loaded and holstered), they will check with the timekeeper and make sure the timekeeper is ready. Once the timekeeper is set, the competitor will say “standby...GO” and begin the drill from the holster (time starts on GO). The competitor will draw their pistol from the holster and engage any section of the engineer tape. The competitor will continue to engage until the engineer tape (target area) is severed, causing the steel plate hanging from it to fall to the ground. If at any point the competitor needs to reload, they will do so on their own. The time stops once the competitor completely severs the engineer tape. To successfully pass this challenge, the competitor and the challenger(s) must complete the tasks in the allotted time frame.

IMPORTANT: *Target Preparation; the competitor, using brightly colored engineer marking tape or other similar style cloth material ties a slip knot and wraps it around the top of the steel target stand. Using approximately 2 feet (this is the available target area) a steel plate is connected to the bottom of the engineer marking tape to put tension on the tape. The area to be severed by impacting rounds is covering an area on the upper steel target to prevent damage to target stand. The lower hanging steel target is there just to provide tension on the engineer marking tape.*

Tasks:

Completely sever the engineer tape and beat the clock

Distance:

Stationary, 20-yard line

Loadout:

2 magazines with 3 live rounds in each magazine

Time:

Time limit set by the first competitor

Targets:

Engineer tape

Skills Strengthened:

problem solving and shooting fundamentals

Challenge Type:

“No shit, there I was” – NSTIW Flag Challenge
